# SQL DATABASE

Raymond Bell

November 29, 2022

The table below was generated from a SQL database query that extracted employee number, last name, first name, and sex from the employee table. Then we had to execute an inner join to salaries, by the employee number, to extract the salary data. As shown in the database diagram, the selected columns are contained within these two tables.

Given the table above we can determine the names of the employees hired in 1986. This information could be used to determine eligibility for rewards and benefits, according to years of service. There are a number of other scenarios where a query such as this might be used.

The table above shows a list of twenty last names, including the number of employees with a particular last name. According to this fictitious data, there are 226 employees whose last name is Baba.

**BONUS:**

Create a histogram to visualize the most common salary ranges for employees

```
count    300024.000000
mean      52970.732451
std       14301.478491
min       40000.000000
25%       40000.000000
50%       48681.000000
75%       61758.000000
max       129492.000000
Name: salary, dtype: float64
```

The graph and table above show the minimum salary as \$40,000, while the maximum salary is \$129,492. Further, the table shows the other descriptive statistics. Notice that the majority of the salaries are between \$40,000 and \$48,000. Fewer salaries are above \$100,000. We can do additional queries to determine the number of employees earning this amount and above, including the corresponding roles or titles. Based on the data, it appears that these salary ranges are attributed to executive level management. The bar chart below gives a snapshot shot of job titles, including salary ranges. Notice that the senior staff members are the top earners. This would suggest that executive level management are not included in this pool, representing the outliers seen in the histogram above.

Create a bar chart of average salary by title

The graph above shows the different job titles along with the average salaries across the Sales and Development departments.
